

Division: Chassis & Safety

Head: Dr. Ralf Cramer

Responsible Executive Board Member:

Dr. Karl-Thomas Neumann

Sales: more than EUR 5 billion

Employees: more than 27,000 worldwide

Locations: over 65 worldwide

Business Units:

- Electronic Brake Systems
- Hydraulic Brake Systems
- Sensorics
- Passive Safety & ADAS
- Chassis Components

Chassis & Safety develops and produces electronic and hydraulic brake and chassis control systems, sensors, driver assistance systems, airbag systems, windshield washer systems and occupant detection systems as well as electronic air suspension systems.

Focus

- Brake, chassis, sensor and driver assistance systems for an automotive future in which accidents and injuries are prevented
- Technologies for driving dynamics in which safety and driving pleasure are intrinsically linked
- The integration of high-quality vehicle components and sound knowledge in systems to form our ContiGuard® safety concept

Range of products and systems

Our unique innovative prowess ranges from intelligent and integrated safety and electronic brake systems through life-saving driver assistance and occupant protection systems to sophisticated chassis electronics. The success of our technologies are reflected in products with a strong market position like ESC, high-tech products such as adaptive cruise control and environment sensors or future-oriented developments such as active rear axle kinematics and vehicles equipped with ContiGuard® that can prevent accidents and injuries (Vision Zero).
