

Interview 3

Mr. Beyler: In charge of the forklift fleet for KUHN agricultural machines in Saverne.

Continental Mr Beyler, could you give us an idea of the size of your forklift fleet at this site, as well as your decision for testing the CSEasy?

Mr. B. I am responsible for a fleet of roughly fifty gas-powered internal combustion forklifts of the model H25 and I agreed to take part in the CSEasy tyre testing, simply because here we have high volume of tyre usage due to the loading dock in the central warehouse. Service life of 800 hours or roughly three months of use.

Continental Let's start with the mounting of the tyre, what do you think of it?

Mr. B. Very easy and without the requirement of a press.

Continental After the first three months of testing, how do you assess the quality of the tyre?

Mr. B. It can withstand a lot! In my opinion its performance is identical to the SC 15, or even a bit better, but I'll wait until the test is concluded before saying anything about how many more hours it achieved.

Continental What about comfort?

Mr. B. Currently drivers have not noticed any difference in terms of driving comfort in comparison to the SC 15, but the tyre performance is closely monitored and evaluated.
